Summary

Computer Science undergraduate at the University of Wollongong (SIM Global Education) with a Diploma in Information Technology (Software Engineering). Experienced in cloud architecture, backend API development, full-stack systems, and applied AI through project work at Goh Ventures and customer-facing technical showcases at Oracle.

Skills

Languages: C++, C#, Python, Java, JavaScript, TypeScript, PHP, HTML, CSS, Kotlin

Frontend: React, Vue 3, Next.js, Tailwind, Bootstrap

Backend: Node.js, Express, FastAPI, Laravel

Databases: MySQL, SQLite, SQL Server, MongoDB, Firebase, DynamoDB, Supabase

Cloud: AWS S3, Oracle Object Storage, Oracle Compute, Oracle Autonomous Database

Tools: GitHub, Jira, Figma, Android Studio, VS Code, Visual Studio

Other: TensorFlow, Unreal Engine, DJI Mobile SDK, OpenCV, MediaPipe

Experience

Freelance Developer

Apr 2026–Present

Goh Ventures

Singapore

- Provide development support across assigned projects, specialising in cloud architecture and backend API development.
- Contribute to Urbanware 2.0 and Sales Dojo, supporting service integrations, application workflows, and technical delivery.

Cloud Engineering Intern

2025–2026

Oracle

Singapore

- Built and operated the Interactive AI Hologram, a customer-facing showcase used in live demonstrations for customer engagements and leadership presentations.
- Supported customer engagements and demonstrations for the F1 Simulator, tailoring system setup and delivery to different audience and business requirements.
- Improved showcase reliability through structured runbooks, readiness validation, rapid fault isolation, and cross-system troubleshooting during live events.
- Collaborated cross-functionally to refine architecture, optimize performance, and incorporate stakeholder feedback into production-ready technical demos.
- Contributed to an AI-enabled drone initiative involving computer vision and remotely callable drone-control workflows for autonomous operation scenarios.

Comms Technician

2021–2023

Singapore Armed Forces

Singapore

- Maintained and troubleshooted PRC-940A VHF communication systems and embedded network systems deployed on armored vehicle platforms.
- Performed preventive diagnostics, structured fault isolation, and servicing to sustain operational readiness and reduce downtime.
- Managed equipment accountability, logistics, and maintenance logbooks to ensure assets remained properly tracked, serviceable, and deployment-ready.

Education

University of Wollongong (SIM-GE)

2026–Present

Bachelor of Computer Science (Artificial Intelligence and Big Data)

Ngee Ann Polytechnic

2023–2026

Diploma in Information Technology (Software Engineering)

GPA: 3.9875

Certifications

Professional Scrum Master I
OCI Foundations Associate

Awards

- Director's List (Year 1.1, 1.2, 2.1, 2.2)
- Best in Module: Data Science Fundamentals; Mobile Applications Development; Full Stack Development Project
- Diploma with Merit — Top 10% of cohort

Projects

Freelance Projects

Urbanware 2.0 — Laravel, Vue 3, SQL Server, Azure

- Contributed to an e-commerce platform covering catalogue management, business checkout, order processing, and administration.
- Worked across HitPay payment and refund flows, government purchasing integrations, bulk product imports, and Azure deployment workflows.

Sales Dojo — Python, FastAPI, LiveKit, Google AI, Next.js

- Updated the AI sales-call engine for voice-driven prospect practice and live coaching for insurance advisors.
- Supported transcript-based coaching and post-call feedback through FastAPI and LiveKit worker workflows.

Oracle Projects

Interactive AI Hologram — LLM, RAG, TTS

- Developed a real-time conversational avatar with speech recognition, LLM response generation, and TTS output.
- Implemented a synchronized animation pipeline for immersive live demos.

AI Drone Surveillance Platform — Kotlin, DJI Mobile SDK, FastAPI, OpenCV, MediaPipe

- Built an Android application in Kotlin for drone operations with pose estimation, fire/smoke detection, background subtraction, and intruder detection.
- Implemented DJI Mobile SDK workflows for backend-triggered commands, remote maneuver execution, and autonomous operation scenarios.
- Developed backend-to-controller integration for event-driven command dispatch, media capture, and real-time drone orchestration.

School Projects

BannerBites — Node.js, DynamoDB, React, Tailwind

- Built a cloud-based advertisement management platform with grid-based scheduling and layout configuration.
- Developed REST APIs using Node.js and DynamoDB for persistent storage and retrieval.
- Implemented a responsive React frontend with real-time state updates.

PocketChef — Java, SQLite, Firebase, TensorFlow

- Integrated Spoonacular API for recipe generation from pantry inputs.
- Implemented QR scanning, image classification, and voice interaction.
- Designed hybrid local and cloud persistence with SQLite and Firebase.

Additional

Languages: English (Professional), Mandarin (Conversational)
